Tran Ngoc Tam

Backend Software Engineer

Dob: 23/03/2001
Gender: Male
Phone: 0909762942
Email: ngoctam2303001@gmail.com
Website: https://tamfuldev.github.io
Address: Ho Chi Minh City

OBJECTIVE

Backend Software Engineer with over 4 years of experience in developing and operating web systems for the Japanese market. Proficient in PHP/Laravel, RESTful API design, database optimization, and infrastructure deployment using Docker. Experienced in Agile/Scrum processes and high-quality work culture with Japanese partners. Currently learning Japanese to enhance direct communication with clients and colleagues.

Moving forward, my short-term goal is to leverage my advancing Japanese communication skills (targeting N3/N2) to transition into a Bridge Software Engineer (BrSE) role within the next 1-2 years. In the long term, I aim to pivot and evolve into an AI Engineer, integrating artificial intelligence and machine learning models into large-scale backend architectures and distributed systems.

SKILLS

Backend	PHP, Laravel, RESTful API
Frontend	HTML/CSS/JavaScript, Twig/Blade Template
DevOps	Docker, Git, Linux, Nginx, Apache
Database	MySQL, Redis (Cache/Queue)
Security	OWASP Top 10, SQL Injection Prevention, XSS Prevention, JWT, Laravel Sanctum
Quy trình	Agile/Scrum, Code Review, Sprint Planning, Backlog
Ngôn ngữ	English (Technical Reading), Japanese (Learning N5)

WORK EXPERIENCE

2022 - Nay

Wacontre Co., Ltd
Software Engineer

- Develop and maintain large-scale Laravel backend systems, ensuring stability and availability in production environments.
- Design and deploy RESTful APIs, integrating third-party services and payment gateways per Japanese client requirements.
- Optimize system performance through Redis caching, SQL query tuning, and refactoring code using Clean Architecture.
- Deploy background jobs, queue processing, and cron jobs to handle heavy tasks without impacting user experience.
- Collaborate closely with BA, QA, and Japanese teams in Agile/Scrum processes including sprint planning, code review, and release.

2021 - 2022

ONICORN MEDIA JSC
Fresher Fullstack Engineer

- Led development teams using Agile/Scrum, including sprint planning, task assignment, code review, and release coordination.
- Developed and maintained Laravel web applications, improving code quality and system performance.
- Collaborated with BA, UI/UX, and QA to implement new features and resolve production bugs.

- Participated in requirement analysis, database design, and system operation support.

PROJECTS

2022 - 2024

Hello Activity (Japan-based B2C tour and travel experience booking platform)

Backend Engineer

- Built an automated scheduling system for tour agencies, eliminating booking conflicts.
- Developed a real-time chat feature between customers and agencies, significantly reducing response times.
- Integrated multi-language and multi-currency systems to serve international users.
- **Tech stack:** Laravel, MySQL, Redis, Docker, RESTful API.

2023 - 2025

Kimikura (Japan-focused B2C E-commerce platform)

Backend Engineer

- Refactored the entire order management module, improving maintainability and reducing technical debt.
- Developed core modules: product management, shopping cart, coupons, payment processing, email services, and CSV import/export.
- Optimized product list queries and backend workflows, noticeably improving system response speed.
- Enhanced system security by following the OWASP Top 10 checklist, implementing protections against SQL Injection/XSS, and using JWT/Laravel Sanctum for authentication.
- **Tech stack:** Laravel, MySQL, Redis, Docker, RESTful API, Batch Job, JWT.

EDUCATION

2019 - 2022

Thu Duc College of Technology

Major: Information Technology

Grade: Excellent
