Tran Ngoc Tam

Backend Software Engineer

Email: ngoctam2303001@gmail.com
Phone: 0909762942
Website: https://tamfuldev.github.io
Address: Ho Chi Minh City

OBJECTIVE

Backend Software Engineer with over 4 years of experience building and operating large-scale web systems for the Japanese market. Proficient in PHP/Laravel, RESTful API design, database optimization, and infrastructure deployment with Docker. Experienced working directly with Japanese partners in Agile/Scrum environments, ensuring quality and on-time delivery.

Currently expanding into AI engineering, focusing on integrating AI/ML models into backend architectures — leveraging existing system design and API experience to build intelligent, scalable applications.

SKILLS

Backend	PHP, Laravel, RESTful API
Frontend	HTML/CSS/JavaScript, Twig/Blade Template
DevOps	Docker, Git, Linux, Nginx, Apache
Database	MySQL, Redis (Cache/Queue)
Security	OWASP Top 10, SQL Injection Prevention, XSS Prevention, JWT, Laravel Sanctum
Quy trình	Agile/Scrum, Code Review, Sprint Planning, Backlog
Ngôn ngữ	English (Technical Reading), Japanese (Learning N5)

WORK EXPERIENCE

2022 - Nay

Wacontre Co., Ltd
Backend Software Engineer

- Developed and maintained large-scale Laravel backend systems serving **1,000–10,000 users**, ensuring stability and high availability in production environments.
- Designed and deployed RESTful API, integrating Japanese payment gateways (credit card, convenience store payment) per client requirements.
- Deployed background jobs, queue processing, and cron jobs to handle **hundreds of tasks per day**, reducing load on the main workflow without impacting user experience.
- Optimized system performance through Redis caching and SQL query tuning, achieving noticeable improvements in response time.
- Collaborated with BrSE and Japanese partners via direct meetings, email/chat in Japanese, and technical documentation review throughout the Agile/Scrum process.

2021 - 2022

ONICORN MEDIA JSC
Fresher Fullstack Engineer

- Led a team of **4–6 developers** using Agile/Scrum — sprint planning, task assignment, code review, and release coordination to meet project deadlines.
- Built end-to-end B2C e-commerce and blockchain web systems on Laravel, from database design to production deployment.
- Collaborated with BA, UI/UX, and QA to implement new features and resolve production bugs, ensuring product quality.

PROJECTS

2022 - 2024

Hello Activity (B2C Tour Booking Platform — Japanese Market)

Backend Engineer

- Built an automated scheduling system for travel agencies, completely eliminating booking conflicts.
- Developed a real-time chat feature between customers and agencies, significantly improving response time and booking decision support.
- Integrated support for **5+ languages and currencies**, expanding the platform to serve international users.
- **Tech stack:** Laravel, MySQL, Redis, Docker, RESTful API.

2023 - 2025

Kimikura (B2C E-commerce Platform — Japanese Market)

Backend Engineer

- Developed and improved core modules: product management, shopping cart, coupons, payment processing, email services, and CSV import/export.
- Integrated third-party APIs, deployed Redis Cache and Batch/Cron Jobs for background processing tasks, reducing load on the main system.
- Strengthened system security following the OWASP Top 10 checklist: SQL Injection/XSS prevention and user authentication with JWT/Laravel Sanctum.
- **Tech stack:** Laravel, MySQL, Redis, Docker, RESTful API, Batch Job, JWT.

EDUCATION

2019 - 2022

Thu Duc College of Technology

Major: Information Technology

Grade: Excellent
